Application for: Frontend Developer

Company: qiibee

Dear Hiring Manager,

My name is Marco Maffei, and I am a full-stack developer with 9 years of experience.

For the past five years, I have been working as an external full-stack developer at Isabel Group, Belgium's leading fintech company. In my role at Isabel, I have been the sole full-stack developer within a two-person web team, collaborating closely with a webmaster, DevOps, and SecOps teams to ensure the highest standards of performance, security, and reliability. I have been fully responsible for the development and maintenance of 19 web applications tied to the company's marketing ecosystem, handling all coding and technical tasks.

Our infrastructure is hosted on AWS and includes a variety of technologies such as WordPress, Node.js, Laravel-based custom PHP applications, and Jamstack solutions that consume REST APIs from external low-code platforms.

For front-end development and rendering, we employ modern JavaScript frameworks like React and Vue (and recently Next.js and Nuxt.js), along with templating engines and custom-built solutions.

Additionally, I've been integrating diverse systems via REST APIs to streamline internal processes and enhance data accessibility. Recently, I've also expanded into Python development, focusing on automation solutions to support operational efficiency.

I'm interested in applying for the Frontend Developer position currently available at qiibee and believe that my experience in both back-end and front-end development, combined with my collaborative mindset and problem-solving skills, could potentially make me a good match for the role.

Please feel free to contact me if you have any questions or require further information, I'd be happy to discuss how I can contribute to your team.

Kind regards,

Marco Maffei

Full Stack Developer
